

# Enhanced Business Intelligence

Rapid Integration Between Oracle Fusion Applications, Oracle Autonomous Data Warehouse, and Oracle Analytics Cloud

Sesame Software's data management platform, Relational Junction (**RJ**), provides rapid integration for Oracle Fusion Applications, Oracle Autonomous Data Warehouse (**ADW**), and a wide variety of other data sources, cloud applications, and databases. All connected data sources can be moved into any analytical database, such as Autonomous Database (**ADB**), to be used by Oracle Analytics Cloud (**OAC**) for business insights.

## Why Store Oracle Fusion Applications Data into ADW?

### Complete 360-Degree View

Eliminate silos by connecting all of your data sources - ERP, HCM, CRM, CX, and more to ADW, enabling cross-departmental analysis with end-to-end visibility.

### Deeper Analytical Insights

Centralize Oracle Fusion data into ADW to be utilized by powerful BI tools, such as OAC, in a deeper, more meaningful manner, allowing for greater business insight.

### Retain Historical Data

Store data into ADW to ensure past records are kept intact, allowing for historical trends, which is a feature only possible with an intelligent cloud data warehouse solution.

### Turnkey Deployment

After just a few minutes of setup, RJ replicates all your applications and databases into ADW. RJ updates your data warehouse as new data becomes available, so your data is always fresh. No data mapping, coding, or maintenance is required.

# Rapid Integration Between Oracle Fusion, ADW, and OAC with Relational Junction

Relational Junction is a powerful tool that allows you to leverage ADW as a single-source-of-truth for your data. RJ provides an instant data warehouse for Oracle Fusion Applications, enabling scalable data integration that improves the reliability and performance of reporting and analytics. The data transfer is seamless, with fault-tolerant architecture that streams your Fusion data to your data warehouse and preferred BI tool, such as OAC, with zero data loss.

## Why Relational Junction?

- ✓ Fastest, most dependable solution for loading data into ADW
- ✓ Patented algorithms for extracting large datasets of cloud data without failure
- ✓ Vetted by OAC and ADW teams as a key component that maximizes Oracle's solution stack
- ✓ Top data ingestion tool within the Oracle Partner Ecosystem, allowing customers to bring data from various sources to their data warehouse, data lake, or lakehouse in just minutes
- ✓ High-performing innovative platform that integrates with Oracle Cloud Infrastructure's compute, storage, and database services to power Big Data and analytics projects

## About Sesame Software

Sesame Software is the Enterprise Data Management leader, delivering data rapidly for enhanced reporting and analytics. Sesame Software's data platform combines data warehousing, integration, replication, and backup capabilities to fit your business needs. Quickly connect to SaaS, on-premise, and cloud applications for accelerated insights. Learn more today!
